

Vital Statistics 2003 The UK Gay Men's Sex Survey

Wales Health Board of residence data report

(updated May 2008)

The *Gay Men's Sex Survey* 2003 was conducted by Sigma Research in collaboration with health promoters throughout Britain and Ireland. This report supplements the main annual report for the survey called *On the move: findings from the United Kingdom Gay Men's Sex Survey, 2003*. It is available at: www.sigmaresearch.org.uk/go.php/reports/report2004g/

Survey methods and interpretation of the data were outlined in that report. This data report is intended to provide HIV health promotion planners with information about their local population. The report contains data from men who live in Wales and for whom Health Board of residence is known. Respondents are grouped according to the Board in which they live.

The data

The survey used two data collection methods over the summer of 2003:

- (1) A self-sealing, Freepost addressed booklet distributed by 124 British HIV health promotion and gay agencies;
- (2) On a specific website promoted via links on 35 gay and HIV-related websites. Two websites, gay.com/uk and gaydar.co.uk, conducted substantial paid for promotion of the survey

This report contains data from all the men recruited through **both methods**.

To be included in this sample respondents had to:

- be male;
- be aged 14 or over;
- be living in Wales;
- have had sex with a man in the last year and / or expect to have sex with a man in the future;
- have completed at least one demographic question and one other question.

Differences between the number of surveys returned and the number of men who appear in the sample are due to these exclusions.

The tables

Groups of men living in the same Health Board appear as a row (lines across) in the tables. The bottom row of each table gives the result for all the residents of Wales. The first table shows the number of men recruited to the survey living in each Board and the size of the sub-samples in the rest of the tables. The tables show the proportions (%) of each sub-sample for that variable (less missing data). Rows add up to 100%. The only exception to this layout is table 3 (Age Averages).

Questionnaires

The contents page identifies the Booklet question number (Q) each table is derived from. The questionnaire used in the survey is available to download at:

www.sigmaresearch.org.uk/files/VS2003booklet.pdf

Funding

In Northern Ireland this research was funded by the Rainbow Project. In Scotland, by Healthy Gay Scotland, a Scottish Executive funded HIV prevention initiative. In England and Wales, by Terrence Higgins Trust as part of CHAPS, a national HIV prevention initiative funded by the English Department of Health and Welsh Assembly.

Table Contents

SAMPLE DESCRIPTION

1. Web and Booklet sample sizes.
2. Age groups; Q1 grouped into ten year age bands.
3. Age averages; from Q1 the age of the youngest and oldest man, their median age (line them up by size and pick the one in the middle), mean age (add them up and divide by how many there are), and a measure of how spread out along the range they are (the standard deviation).
4. Ethnicity; Q2.
5. Formal education; from Q3, low is educated to O-levels / CSEs / GCSE or equivalent; high is educated to degree level; medium includes A-levels, diplomas and professional qualifications.
6. Annual income; Q9.
7. Perceived financial management ; Q12.
8. HIV testing history; Q16.
9. GP registration; Q32.
10. Awareness by GP staff of sex with men (those who are registered with a GP); Q33.

SOCIO-SEXUAL CONTEXT

11. Gender of sexual partner in the last year; Q20.
12. Number of male sexual partners in the last year; Q22 (those who had sex with men).
13. HIV concordancy of regular relationship; Q13 & Q15.

SEXUAL RISK BEHAVIOURS

14. Number of partners with whom had receptive unprotected anal intercourse (RUAI), in the last year (those who had male partners); Q23.
15. Likelihood of having RUAI with a man with a different HIV status (among those who had RUAI in the last year); Q24.
16. Number of partners with whom had insertive unprotected anal intercourse (IUAI), in the last year (those who had male partners); Q25.
17. Likelihood of having IUAI with a man with a different HIV status (among those who had IUAI in the last year); Q26.

UNMET HIV PREVENTION NEEDS

18. Sexual assault in the last 12 months; Q27.
19. Difficulty getting hold of condoms; Q28.
20. Difficulty getting hold of water based lube; Q28.

CONDOM SOURCES

- Experience of getting condoms in the previous 12 months; Q29
21. Bought condoms
 22. Got condoms free
 23. Sexual partners usually had condoms
 24. Friends usually gave condoms

HIV KNOWLEDGE

25. *An HIV negative man is more likely to pick up HIV by getting fucked by an HIV positive man than by fucking him; Q31.*
26. *When fucking an HIV negative man without a condom, an HIV positive man is more likely to pass on HIV infection if either of them already has another sexually transmitted infection; Q31.*
27. *Men can have HIV without knowing it; Q31.*
28. *When fucking an HIV negative man without a condom, an HIV positive man is more likely to pass on HIV infection if he ejaculates (cums) in his partner; Q31.*
29. *Condoms are less likely to break if you use a water-based lubricant; Q31.*
30. *An HIV positive man who has undetectable viral load (in his blood) can still pass on HIV; Q31.*

POST EXPOSURE PROPHYLAXIS

31. Heard of Post Exposure Prophylaxis (PEP); Q45.
32. Tried to get PEP; Q46.
33. Ever taken PEP; Q47.
34. Know anyone who received PEP; Q48.
35. If you thought you had been exposed to HIV would you consider trying to get PEP? (those not tested HIV positive); Q49.
