Vital Statistics 2003 The UK Gay Men's Sex Survey

Area sub-samples data report (updated May 2008) South Central Strategic Health Authority

The Gay Men's Sex Survey 2003 was conducted by Sigma Research in collaboration with health promoters throughout Britain and Ireland. This report supplements the main annual report for the survey called On the move: findings from the United Kingdom Gay Men's Sex Survey, 2003. It is available at: www.sigmaresearch.org.uk/go.php/reports/report2004g/ Survey methods and interpretation of the data were outlined in that report. This data report is intended to provide HIV health promotion planners with information about their local population. There is one data report for each of the Strategic Health Authorities in England. In each report men are usually grouped according to their Primary Care Trust (PCT) of residence.

The data

The survey used two data collection methods over the summer of 2003:

- (1) A self-sealing, Freepost addressed booklet distributed by 124 British HIV health promotion and gay agencies;
- (2) On a specific website promoted via links on 35 gay and HIV-related websites. Two websites, gay.com/uk and gaydar.co.uk, conducted substantial paid for promotion of the survey.

This report contains data from all the men recruited through **both methods**. To be included in this sample respondents had to:

- be male;
- be aged 14 or over;
- be living in the South Central SHA;
- have had sex with a man in the last year and / or expect to have sex with a man in the future;
- have completed at least one demographic question and one other question.

Differences between the number of surveys returned and the number of men who appear in the sample are due to these exclusions.

The tables

Groups of men living in the same PCT area appear as a row (lines across) in the tables. The bottom row of each table gives the result for the entire area being considered. The first table shows the number of men living in each PCT area and the size of the sub-samples in the rest of the tables. PCT areas with fewer than 20 men and amalgamated PCT areas (where men cannot be allocated to an individual PCT area) are reported as "all other men". The tables show the proportions (%) of each sub-sample for that variable (less missing data). Rows add up to 100%. The only exception is table 3 (Age Averages).

Questionnaires

The contents page identifies the Booklet question number (Q) each table is derived from. The questionnaire used in the survey is available to download at: www.sigmaresearch.org.uk/files/VS2003booklet.pdf

Funding

In Northern Ireland this research was funded by the Rainbow Project. In Scotland, by Healthy Gay Scotland, a Scottish Executive funded HIV prevention initiative. In England and Wales, by Terrence Higgins Trust as part of CHAPS, a national HIV prevention initiative

funded by the English Department of Health and Welsh Assembly.

SAMPLE DESCRIPTION

- 1. Web and Booklet sample sizes.
- 2. Age groups; Q1 grouped into ten year age bands.
- 3. Age averages; from Q1 the age of the youngest and oldest man, their median age (line them up by size and pick the one in the middle), mean age (add them up and divide by how many there are), and a measure of how spread out along the range they are (the standard deviation).
- 4. Ethnicity; Q2.
- 5. Formal education; from Q3, low is educated to O-levels / CSEs / GCSE or equivalent; high is educated to degree level; medium includes A-levels, diplomas and professional qualifications.
- 6. Annual income; Q9.
- 7. Perceived financial management; Q12.
- 8. HIV testing history; Q16.
- 9. GP registration; Q32.
- 10. Awareness by GP staff of sex with men (those who are registered with a GP); Q33.

SOCIO-SEXUAL CONTEXT

- 11. Gender of sexual partner in the last year; Q20.
- 12. Number of male sexual partners in the last year; Q22 (those who had sex with men).
- 13. HIV concordancy of regular relationship; Q13 & Q15.

SEXUAL RISK BEHAVIOURS

- 14. Number of partners with whom had receptive unprotected anal intercourse (RUAI), in the last year (those who had male partners); Q23.
- 15. Likelihood of having RUAI with a man with a different HIV status (among those who had RUAI in the last year); Q24.
- 16. Number of partners with whom had insertive unprotected anal intercourse (IUAI), in the last year (those who had male partners); Q25.
- 17. Likelihood of having IUAI with a man with a different HIV status (among those who had IUAI in the last year); O26.

UNMET HIV PREVENTION NEEDS

- 18. Sexual assault in the last 12 months; O27.
- 19. Difficulty getting hold of condoms; Q28.
- 20. Difficulty getting hold of water based lube; Q28.

CONDOM SOURCES

Experience of getting condoms in the previous 12 months; Q29

- 21. Bought condoms
- 22. Got condoms free
- 23. Sexual partners usually had condoms
- 24. Friends usually gave condoms

HIV KNOWLEDGE

- 25. An HIV negative man is more likely to pick up HIV by getting fucked by an HIV positive man than by fucking him; Q31.
- 26. When fucking an HIV negative man without a condom, an HIV positive man is more likely to pass on HIV infection if either of them already has another sexually transmitted infection; Q31.
- 27. Men can have HIV without knowing it; Q31.
- 28. When fucking an HIV negative man without a condom, an HIV positive man is more likely to pass on HIV infection if he ejaculates (cums) in his partner; Q31.
- 29. Condoms are less likely to break if you use a water-based lubricant; Q31.
- 30. An HIV positive man who has undetectable viral load (in his blood) can still pass on HIV; Q31.

POST EXPOSURE PROPHYLAXIS

- 31. Heard of Post Exposure Prophylaxis (PEP); Q45.
- 32. Tried to get PEP; Q46.
- 33. Ever taken PEP; Q47.
- 34. Know anyone who received PEP; Q48.
- 35. If you thought you had been exposed to HIV would you consider trying to get PEP? (those not tested HIV positive); Q49.
